

Pony Express Programming Challenge

The purpose of this coding task is make a Ponyexpress REST API , which returns one or more contact that belong to a PonyExpress account.

How to make it work

- 1) First download the files from github
- 2) Then run the following commands in the powershell/cmd to install the relevant packages.
- 3)
 - `npm init`
 - `sudo npm install express -- save`
 - `sudo npm install express-rate-limit`
 - `sudo npm install mongodb -- save`
- 4) Install Mongo
- 5) open mongocompass
- 6) connect to the localhost
- 7) create a database of the name pony_challengeDB
- 8) create collection of the same name as the .csv file
- 8) import the contacts.csv and account.csv to that collection
- 9) To run go to the src folder and type the command
`node index.js`
- 10) type <http://localhost:3000/> to run code

API is deployed on Amazon ec2 , please contact razafaraz96@gmail.com to activate the link
